

# Make Your Brand Stick on DWR

## DWR TRANSFER

At Japan Polymark, we are dedicated to making marking technology that works without the use of fluorine, as the industry continues toward PFC-free DWR fabric. With our extensive work blending resins to make our own adhesives, we've made great strides toward perfecting marking technology not just for C6 DWR, but for PFC-free DWR fabric as well. Use our high-quality marking solutions to make sure your brand logo sticks.

### Sports

Even on the kind of supple fabric used in high-performance sports windbreakers with DWR coating to keep athletes dry and happy, our marking sticks and stays.

### Outdoor

Outdoor wear for use in harsh environments relies on C6 DWR processing to keep the water off, but our marking sticks and stays.

### Ecology

Our clients are committed to C6 and PFC-free DWR processing, and as they have changed their production methods, so have we evolved. It's the right thing to do for our marking technology, and for the environment.

*Let us know if you're considering using our DWR Transfer technology. We will test transfers using your materials to ensure ours is the right solution for you.*
